NEUTRAL BAY NSW 2089

Dear Shubhada

**Re: Donald Low DOB: 26/11/1944**  
8A Buller Street South Turramurra NSW 2074  
Telephone No: 0415 522 577

Donald Low came for review today. His creatinine has gone to 331 with the urea of 25 and an eGFR of 14. Serum potassium was stable at 5.5. The INR was 2.4.

I will admit Mr Low on Thursday next week for a limited coronary angiogram and right heart catheter. His kidneys should be able to cope with adequate rehydration, withholding Lasix on the day and a repeat EUC the night before to ensure that the potassium and creatinine remain stable. He has lost weight and currently weighs 76.6 kg. The blood pressure is around 100/60.

I shall be in touch regarding Mr Low's progress.

With best wishes  
Yours sincerely

**Dr Peter Hansen**
