Laminectomy with spinal fusion in 2024

CVS risks: Hypertension; hyperlipidaemia

Hyponatraemia

BPH. ED

- Arava, Atorvastatin 20 mg/day, Duodart, Lercanidipine 10 mg/day, Physiotens 0.2/0.4mg bd, salt tablets TDS, Sildenafil

Re: TAVI at RNSH

Thanks for arranging to review this 81-year-old who has severe aortic stenosis. It is minimally symptomatic but very severe and I think it would be good to start arranging a TAVI. I booked him for an angiogram at Gosford Public and I have ordered a TAVI CT scan at PRP.

His echocardiogram shows aortic stenosis with a mean gradient of 67mmHg and a valve area 0.8 cm². He had mild LVH with LV function was slightly down at 50-55%.

Kind regards,
Signed electronically

Tony Kull
