Dear Peter

**RE: Ms Wendy Ross - DOB: 11/06/42
4/16 Victoria Street
East Gosford NSW 2250
0435 023 246**

Thank you very much for seeing Wendy Ross, who has severe aortic stenosis, for consideration for TAVI. She is an 82 year old lady who is new to me. Her history is that of hypertension and a possible previous myocardial infarct, although the history is quite vague. She has poorly controlled hypertension.

Her current medications include Catapres 100mcg nocte, Lipitor 40mg daily, Telmisartan 80mg daily, Dothiepin 75mg daily and Lercanidipine 10mg daily.

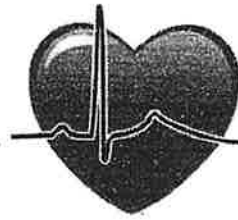

She had an echocardiogram, which shows a mean aortic valve gradient of 51mmHg.

I would be grateful for an assessment for TAVI for this lady.

With kind regards,

DENNIS WANG
Interventional and Structural Cardiologist

Dear Salim

RE: Ms Wendy Ross - DOB: 11/06/42
4/16 Victoria Street
East Gosford NSW 2250
0435 023 246

Thank you very much for referring Wendy along to undertake a cardiac assessment and also to assess her blood pressure. She says her blood pressure has been high for quite a number of years, up as high as 200. She also tells me that she has an aortic root dilatation. She said this was mentioned on her discharge papers both from John Hunter Hospital and also from Gosford Hospital.

Medications include Catapress 100 mcg nocte, Lipitor 40 mg daily, Telmisartan 80 mg daily and Dothiepin 75 mg daily.

Today's ECG demonstrates sinus rhythm. Her blood pressure is 156/102mmHg, which is high but she says this is actually pretty good for her.

I am surprised that her blood pressure has been this high for this many years yet she is still on what is essentially very minimal medication. I suspect her blood pressure must be labile and not this high all the time. I have organised a 24 hour BP monitor and also an echocardiogram and I will catch up with Wendy again in a few weeks time to see whether her blood pressure is indeed this high and needs further adjustments.

With kind regards,

DENNIS WANG
