Wednesday, 28 May 2025

Dear Jim,

**Re: Barry WATSON - DOB: 09/12/1952**

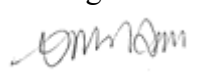

Thank you for requesting angiography pre-TAVI workup. I note creatinine of 210 21<sup>st</sup> of May this year so I restricted myself to 25mls of contrast only.

Via a 6-French right radial artery approach I obtained the following information:

1. The left main is unobstructed.
2. The LAD is of a good calibre with diffuse ectasia. Proximal diagonal has 30-40% disease with a smaller mildly diseased second diagonal and a mildly diseased LAD.
3. The circumflex is of a large calibre and is ectatic. It has one smooth proximal posterolateral and a large smooth terminal posterolateral.
4. The right coronary artery is dominant and ectatic. It is unobstructed.

Jim, Barry will resume Apixaban tonight.

Kind regards

**DR ANDREW HILL**
