

ROYAL NORTH SHORE HOSPITAL
OPERATION REPORT

NAME: ROSEE, Paul
DATE: 4.6.94
SURGEON: Dr D Ross
ANAESTHETIC: General

UNIT NO: 931692

WARD: 8C

PREOPERATIVE ASSESSMENT:

This man with a strong family history was investigated prophylactically and found to have triple vessel disease and a normal ventricle.

OPERATION PERFORMED:

Coronary artery bypass graft x 3 using both mammary arteries

OPERATIVE FINDINGS:

The LAD was profusely diseased and the proximal and middle thirds was opened and the distal third where it was 1.5. Diagonal was on the lower side of 1.5 and the postlateral right was a good 1.5.

OPERATIVE PROCEDURE:

Chest was opened, both mammaries were taken down, the left as a pedicle the right as a free graft. The right was then anastomosed Y fashioned to the left mammary prior to commencement of bypass then using routine bypass and myocardial protection the right graft was attached end-to-side to the postlateral right and the left graft was attached side-to-side to the diagonal and end-to-side to the LAD. This resulted in no top ends, the entire blood supply coming from the proximal left mammary artery.

At the conclusion of procedure pacing of bypass without any problems and the pericardium was closed with a fat pad.
