Monday, 24 March 2025

Dear Alfred,

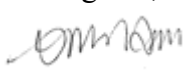

Re: Kevin RIGGS - DOB: 14/07/1945

Kevin has attended rooms today:

1. **Progressively deteriorating aortic heterograft from 2011 with stenosis noting echo August last year including a peak of 44mmHg, a mean of 27mmHg and valve area of 1.2cm². Normal BNP July 2024 but elevated and needing diuretics March 2025. I will attend to angiography at Gosford Hospital off Apixaban the night before and the morning of as a prelude to TAVR via RNS and I will then refer him to Peter Hanson.**
2. **Kevin has undergone anaesthetics for bladder carcinoma with some issues related to the same and I have pointed out that angiography does not require anaesthesia and TAVR can be done with very minimal anaesthetic.**
3. **Paroxysmal atrial fibrillation, noting sinus on Holter monitor January 2025.**
4. **Regime: Apixaban 5mg bd, Metoprolol 25mg bd, Atorvastatin 40mg mane, Spiractin 12.5mg mane, Dapagliflozin 10mg mane, Frusemide 40mg mane.**
5. **Weight 94kg, BP 110/60mmHg and in rate controlled atrial fibrillation at 60bpm with an aortic stenotic murmur.**

Alfred, I will attend to angiography and then refer Kevin on for TAVR. Otherwise, I have an echo in the system for next year.

Kind regards,

DR ANDREW HILL
