Cardiology - Structural

Patient: **TELFER, Mrs Janet Isabelle** MRN: **077-21-05**

Age: **84 years** Sex: **Female** DOB: **19/09/1940**

Associated Diagnoses: **None**

Author: **Gray, Benjamin (JMO)**

Progress Note

Gray (AT) Bromhead (CNC)

84F with severe symptomatic aortic stenosis, weight loss, admitted with vertigo ? presyncope

Background:

severe AS, presented with vertigo

Hypertension

hypothyroidism

Presentation/symptoms/functional:

Has had an episode of dizziness around 6 months go

Mobilises independently

Has recently taken her caravan up the north coast, limited in her ability to walk along the beach

Unable to mobilise up hills due to dyspnoea, unable for months - years

Feels this has been progressing

Denies chest pain or tightness

Occasional lower limb oedema noted

Never smoker

Jane aware of the risks of severe AS

Workup:

Coronary angiogram: minor disease

CT TAVI: findings include hypodense liver nodules -> US next step vs triple phase CT

- Study performed for TAVI planning, no significant stenosis within the aorta or iliac/common femoral arteries

Cardiothoracic surgery:

TTE: mean aortic gradient 74 mmHg

Issues:

1. severe aortic stenosis
2. liver lesions
3. outstanding results from workup

Plan:

1. await pulmonary function tests
2. review workup and likely DC tomorrow if no additive clinically relevant findings
3. await surgical opinion
4. present at MDT
